PROFESSIONAL SUMMARY

Vice President and technology architect with 15+ years in software and collaboration systems, including 11 years at a global alternative investment manager. Lead Microsoft 365, Azure and applied AI solutions for Investor Relations, Client Partnerships, Marketing and asset management teams. Build retrieval, document and workflow systems that make unstructured enterprise information easier to find, classify and act on within governance and security requirements.

CORE CAPABILITIES

Enterprise AI: Azure OpenAI, Azure AI Search, RAG, hybrid retrieval, reranking, agents, Copilot Studio, evaluation | Microsoft stack: SharePoint Online, Teams, OneDrive, Power Automate, Power BI, Azure Functions | Engineering: Python, SQL, C#, TypeScript, React, SPFx, PowerShell, ChromaDB | Business systems: Salesforce Marketing Cloud, RFPIO, Seismic

PROFESSIONAL EXPERIENCE

Davidson Kempner Capital Management — Vice President, Senior M365 and Cloud Architect | Jan 2025 – Present

- Asset management reporting: Biweekly emails contained deal updates in inconsistent narrative formats, making status and reporting cadence hard to track. Built an AI reporting tracker that identifies deal codes, classifies content and tracks frequency in structured records for review and compliance visibility.
- Client Partnerships and Business Development intelligence: Biweekly sales and product-specialist emails trapped client sentiment, product interest, potential allocation size and follow-up commitments in unstructured inbox history. Implemented an event-driven Azure pipeline that isolates and cleans each new update, preserves a citation PDF in SharePoint, enriches retrieval-ready chunks with Azure AI Foundry, generates embeddings and indexes more than 20 business metadata fields in Azure AI Search. Enabled governed hybrid and RAG queries through API Management and MCP tools so leadership and client-facing teams can compare reporting periods, identify stalled opportunities or missed follow-ups and verify every insight against its source.
- Shared mailbox task management: Client requests arrived in team inboxes without a consistent way to capture work or analyze volume. Built an AI task manager that detects intent and action items, extracts metadata such as region, and supplies structured activity to Power BI dashboards.

- NDA legal review and reporting: Legal teams manually assembled weekly NDA status updates for investment leaders from emails, attachments and trackers. Automated regional intake and Friday reporting with Power Automate and SharePoint; added an Azure Function to remove email noise, exact checks for legal terms, and Azure AI Foundry extraction of asset and clause metadata. Preserved source documents and Legal decision-making while improving traceability, prioritization and reporting consistency.
- Self-service knowledge: Repeated HR and policy questions were difficult to answer consistently from scattered material. Built Copilot Studio chatbots for these queries, working with business and technology teams on access and governance requirements.
- Team leadership: Led cross-functional delivery of AI, automation and M365 solutions for Investor Relations, Client Partnerships, Marketing and asset management stakeholders in a regulated environment.

Davidson Kempner Capital Management — M365 Collaboration Systems Solution Architect | Nov 2019 – Dec 2024

- Deal teams needed a common place to manage documents and collaborate. Architected SharePoint, Teams and OneDrive environments with document organization, permissions, governance and lifecycle design.
- Connected a cloud deal management platform with on-premises systems through Azure Functions and led Office 365 migrations with Metalogix and Proventeq to consolidate collaboration content.
- Replaced manual approval steps with Power Automate and Nintex workflows; partnered with business units on a firmwide intranet and enterprise search using PnP search web parts.
- Coordinated training and help desk support for OneDrive, Teams, SharePoint and Planner so users could adopt new collaboration and document processes.
- Gathered requirements from front office and business teams, then translated them into collaboration architecture, custom components and rollout plans.

Davidson Kempner Capital Management — Senior SharePoint Developer | Jul 2015 – Oct 2019

- Developed custom SharePoint Online and Teams web parts using TypeScript and React to extend intranet and document workflows for investment and business teams.
- Worked on SharePoint search and content organization so employees could find relevant documents across sites.

EARLIER EXPERIENCE

J.P. Morgan — Senior SharePoint Developer | Jul 2014 – Jul 2015

- Built custom applications for Total Risk Strategy and upgraded SharePoint 2010 to 2013; developed REST integrations, workflows, web parts and SSRS dashboards.
- Created content types, application pages and event handlers to support risk team workflows and exported SharePoint records into PowerPoint reporting templates.

PVH — Senior SharePoint and Web Developer | Jun 2013 – Jul 2014

- Migrated the Warnaco SharePoint environment into PVH and built intranet templates, custom controls, web parts and PowerShell maintenance scripts.
- Supported intranet and team sites through custom list definitions, workflows and front-end development.

Sitrof Technologies — Senior SharePoint Developer | Jun 2012 – Jun 2013

- Redesigned a client .NET application on SharePoint 2010; connected SQL through Business Connectivity Services and built document and form workflows.
- Implemented browser-enabled forms and document sets to bring application data into collaboration and content processes.

Celgene — Senior SharePoint Developer | Mar 2011 – Sep 2012

- Planned and supported a MOSS 2007 to SharePoint 2010 upgrade and intranet rollout, including information architecture, metadata, search and training.
- Gathered department requirements and built portal components, workflows and navigation for HR and training processes.

Earlier roles: Utah Department of Transportation (2010–2011); IBM (2009–2010); Georgia Department of Transportation (2009).

INDEPENDENT PRODUCT

My Krishna iOS App — Independent Product | 2026

- Built and launched a production conversational AI application using Next.js, Supabase, Vercel and Capacitor. Delivered authentication, conversation persistence, responsive web and iOS experiences, deployment and App Store submission end to end.
- App Store: <https://apps.apple.com/us/app/my-krishna/id6782722854>

EDUCATION

University of Bridgeport — Master of Science, Computer Science, 2008 | Saurashtra University — Bachelor of Engineering, Computer Science, 2005

CERTIFICATION

Microsoft Certified: Azure Fundamentals
